New York Heart Association

*CONFERENCE ON CORONARY HEART DISEASE:
PREVENTIVE AND THERAPEUTIC ASPECTS*

Held at The Waldorf-Astoria, New York, N. Y., January 23, 1968

Foreword

IT has been more than a decade since the New York Heart Association held a clinical conference on certain facets of *Atherosclerosis and Coronary Heart Disease*.

In this interval laboratory and clinical investigations into the preventive and therapeutic aspects of atherosclerosis, with particular reference to the coronary circulation, have been greatly intensified here and abroad.

Deeper insights into the roles of diet, heredity, exercise, lipid metabolism, vascular pressure, and myocardial vascularization have stimulated expanded studies with normal as well as patient populations as the experimental medium.

The text of this conference brings together the work of many leading investigators in this field and indicates the promising groundwork on which definitive concepts of prevention and control will inevitably emerge.

CONFERENCE PLANNING COMMITTEE

DR. CHARLES W. FRANK
DR. SEYMOUR H. RINZLER } *Cochairmen*

DR. EDWARD H. AHRENS

DR. GERARD M. TURINO

DR. THEODORE B. VAN ITALLIE
